

PHP / Javascript programming exercise
version 1.0
created on 13-12-2017

In the previous exercises we covered (for) loops, functions and arithmetic operators. In this exercise we combine these topics.

Instruction

Write your own function that prints the numbers from 1 to 100 using a loop. For multiples of three print "Woof" and for multiples of five print "Meow". For numbers which are multiples of both three and five print "WoofMeow".
