PHP / Javascript programming exercise
version 1.0
created on 08-12-2017

Functions help to automate repetitive tasks and enable you to reuse your code. Write your own function that accepts the current month as a parameter and prints one of the following responses, depending on whether it is July or not:

It's July, so it can get really hot.
It's not July, so at least we're not in the peak of the heat.

If you need information about how to write your own functions please read:

https://www.w3schools.com/php/php_functions.asp.(PHP functions)
https://www.w3schools.com/js/js_functions.asp   (JavaScript functions)
